

Plastic Pressure Systems

Price List 2021

Welcome to Effast

Effast by Polypipe, is a well-established brand name that is recognised throughout both the industrial process market and construction industries for its market-leading range of thermoplastic pipework systems. Specialist in PVC and ABS materials, Effast's comprehensive product portfolio offers a proven and effective solution to virtually any requirement. No matter what the project, the Effast range can offer the perfect combination of pressure pipe fittings, ball, butterfly, diaphragm and actuated valves, compression joints, adaptors and other fittings.

Through experience and expertise, we have a detailed understanding of the complexity of our customer's projects, the challenges that can arise and the applications in which our systems are used. Therefore, working within these environments and understanding the regulations required we are able to deliver sustainable pressure systems to applications such as; food and beverage processing, water treatment, marine, spa and swimming pools, mining, building technology and agriculture.

Manufactured in the Cicagna region of Italy, Effast pressure systems are sold to over 60 countries around the world, delivered through a vast distribution network meaning products are readily available, even when needed next day.

Supported by our large UK based manufacturing capabilities, Polypipe leads the way in the research and development of advanced new solutions that satisfy the specific needs of the market, developing patents for our specialist products along the way.

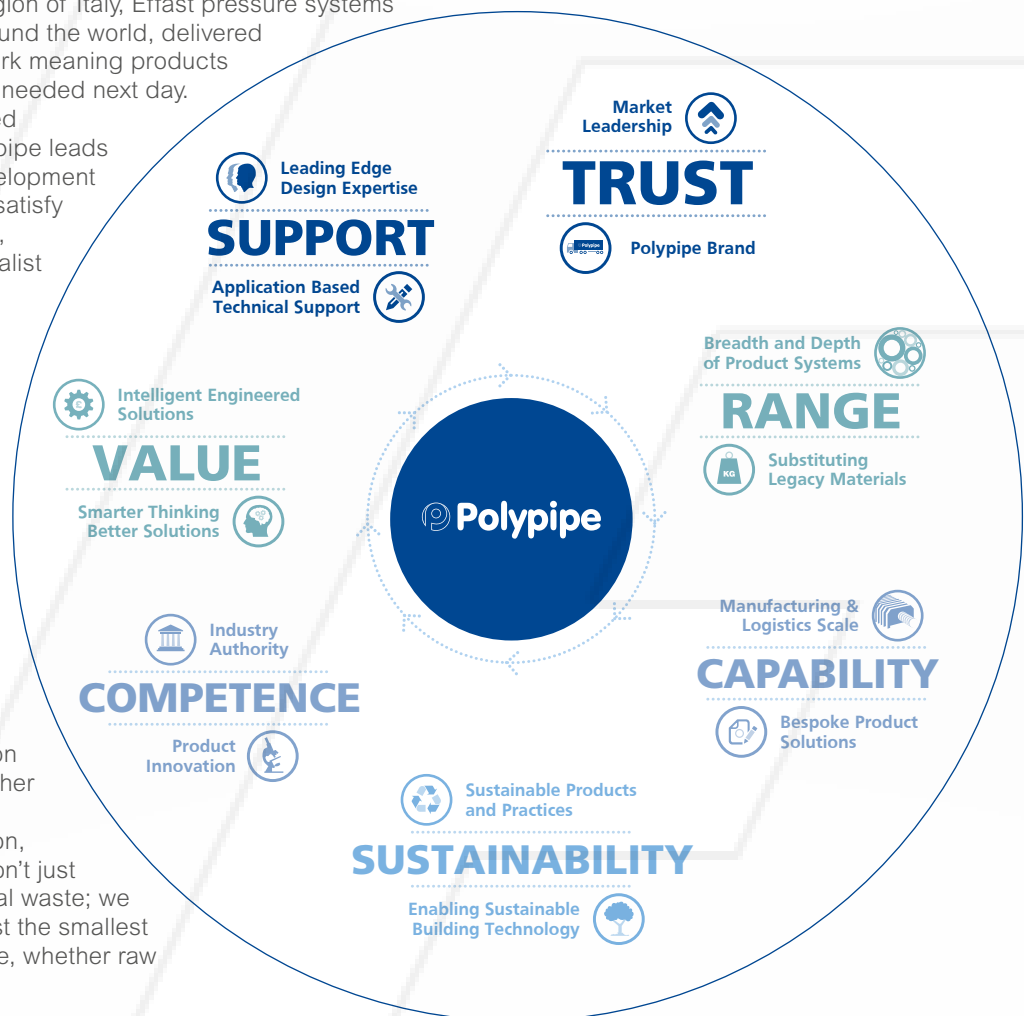

We take our standards seriously and invest in ensuring relevant approvals for all our products where possible – providing outstanding performance, reliability and the quality you expect from a brand like Effast. Ensuring we deliver quality, sustainable products and services means a great deal to us, our supply chain and our customers – and has been recognised with ISO 9001 & ISO 14001 accreditations.

We strive to ensure the generation of waste – both of plastic and other materials – is minimised, to help develop a sustainable, low carbon, resource-efficient service. We don't just recycle all our in-process material waste; we monitor every process and adjust the smallest thing to make a bigger difference, whether raw material, electricity or water.

Dedicated to supporting our customers at every stage, our sales and technical support teams are fully trained on our products, systems, processes, the latest performance requirements, regulations and legislation to be able to provide the best solutions for your project. Investing in our people remains at the core of our business strategy which is why our team focus on delivering a service which stays true to our values; Trust, Support, Experience and Innovation.

We invest heavily in marketing, providing all the technical support you need from design guides, technical drawings and data sheets to BIM modelling and everything in between.

Get in touch and find out how we can support you on your next project.

Polypipe is the UK's largest manufacturer of sustainable water and climate management solutions for the built environment. Offering over 20,000 product lines through 18 facilities across the UK, Europe and Middle East, Polypipe has an unrivalled portfolio of innovative solutions. Operating through sector focused businesses Polypipe ensures our sales and technical teams are equipped to meet the specific needs of residential, civils & green urbanisation, commercial and industrial projects.

Effast Quality Certifications

Our technical experience in product innovation helps us to have a range of products that are always kept up to date and in line with all the latest international standards. For this reason, the quality of the Effast product is the most prestigious in the international field and cover both technical standards and permits for use with drinking water and food fluids according to the regulations in force in various countries.

PVC-u

Tel: 01626 201092

PVC-u Valves, Pipes & Fittings

PVC-u Valves, Pipes & Fittings

Unplasticised polyvinyl chloride (PVC-u) is one of the most widely used thermoplastic materials for pipe installations.

Being odourless and tasteless it is suitable for conveying potable water and many food products. PVC-u has excellent chemical resistance.

The good flow characteristics are the result of the smooth bore and it has good resistance to abrasion.

It is light in weight, easy to join together making PVC-u a good alternative to the more traditional materials.

PVC-u is resistant to most solutions of acids, alkalis, salts and solvents that can be mixed with water.

Additional information in this respect can be obtained from our Technical Department or by reading the Guide to Chemical Resistance at the end of this book.

Materials

Effast PVC-u is stabilised with compounds conforming to the EEC safety levels for vinyl chloride monomer (VCM) and the WRAS requirements for use with potable water.

Colour

PVC-u products are recognised by their dark grey colour RAL 7035.

Chemical Resistance

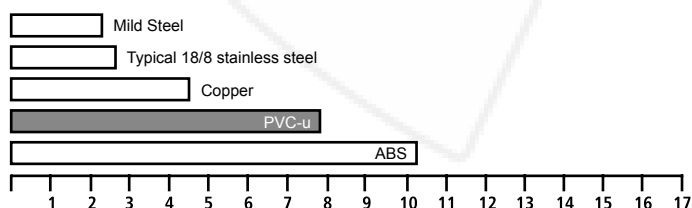

The chemical resistance properties of PVC-u are excellent: it is resistant to most solutions of acids, alkalis and salts and to solvents that can be mixed with water. PVC-u is not resistant to aromatic and chlorinated hydrocarbons.

Thermal Expansion

The thermal coefficient of linear expansion for PVC-u is 7.8×10^{-5} m/m °C

It is necessary in certain situations to make special provision for the expansion and contraction.

Thermal expansion of PVC-u is compared with other materials in the following chart:

Temperature range

0 °C ÷ +60 °C

Standards for Valves

• UNI EN ISO 1452

Plastics piping systems for water supply and for buried and above-ground drainage and sewerage under pressure – Unplasticized poly(vinyl chloride) (PVC-U).

• EN ISO 15493

Plastics piping systems for industrial applications – Acrylonitrile-butadiene-styrene (ABS), unplasticized poly(vinyl chloride) (PVC-U) and chlorinated poly(vinyl chloride) (PVC-C) – Specifications for components and the system – Metric series.

• UNI 11242

Welding – Welding of plastics – Adhesive bonding of PVC-U, PVC-C and ABS pipes, fittings and valves for transmission lines of fluids with or without pressure.

• BS 4346-1

Specification for Joints and fittings for use with unplasticized PVC pressure pipes. Part 1: Injection moulded unplasticized PVC fittings for solvent welding for use with pressure pipes, including potable water supply.

• DIN 8062

PVC-U pipes dimensions.

• ASTM D 2467

Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings. Schedule 80.

• JIS K 6743

Unplasticized poly(vinyl chloride) (PVC-U) pipe fittings for water supply.

• JIS K 6741

PVC-U pipes.

• UNI EN 10226-1

Pipe threads where pressure tight joints are made on the threads – Part 1: Taper external threads and parallel internal threads – Dimensions, tolerances and designation.

• DIN EN 10226-3

Pipes threads where pressure tight joints are made on the threads – Part 3: Verification by means of limit gauges.

• ISO 9393

Thermoplastics valves for industrial applications – Pressure test methods and requirements – Test conditions and basic requirements.

• EN ISO 16135

Industrial valves – Ball valves of thermoplastics materials.

• EN ISO 16136

Industrial valves – Butterfly valves of thermoplastics materials.

• EN ISO 16137

Industrial Valves – Check Valves of thermoplastic materials.

• EN ISO 16138

Industrial valves-Diaphragm valves of thermoplastic materials.

• EN 558-1

Industrial valves-Face-to-face and center-to-face dimensions of metal valves for use in flanged pipe systems – Part 1: PN-designated valves.

• DIN EN 558

Industrial valves – Face-to-face and centre-to-face dimensions of metal valves for use in flanged pipe systems – PN and Class designated valves.

• UNI EN ISO 5211

Industrial valves – Part-turn actuator attachments.

Imperial and Metric Sizes

The following notes may be helpful to those unfamiliar with the different ways of describing metric and imperial sizes when specifying pipe or fittings.

When specifying imperial pipe fittings and other components reference is made to the nominal size of the pipe bore in inches and fractions of an inch.

Metric Systems are specified by reference to the outside diameter of the pipe expressed in millimetres.

As a general guide the following table gives a comparison between metric and imperial sizes up to 8 inches. It is important to understand that metric sizes are not simply inch sizes which have been converted into millimetres and called metric. The actual equivalents are slightly different (except for Imperial size 2½" and metric size 75mm and 5 inches and 140 mm which happen to coincide exactly) and are not interchangeable.

Imperial size (inches)		Metric size (mm)	
Nominal bore	Pipe outside diameter	Pipe outside diameter	Nominal bore
⅜"	17.1	16	10
½"	21.4	20	15
¾"	26.7	25	20
1"	33.6	32	25
1¼"	42.2	40	32
1½"	48.3	50	40
2"	60.3	63	50
2½"	75.2	75	65
3"	88.9	90	80
4"	114.3	110	100
5"	140.2	140	125
6"	168.3	160	150
8"	219.1	225	200

Average Wall Thickness (mm) for Metric Pipe

Diameter (mm)	Average Wall Thickness (mm)	
Outside diameter	10 bar	16 bar
16	–	1.2
20	–	1.5
25	1.5	1.9
32	1.6	2.4
40	1.9	3.0
50	2.4	3.7
63	3.0	4.7
75	3.6	5.6

PVC-u Valves

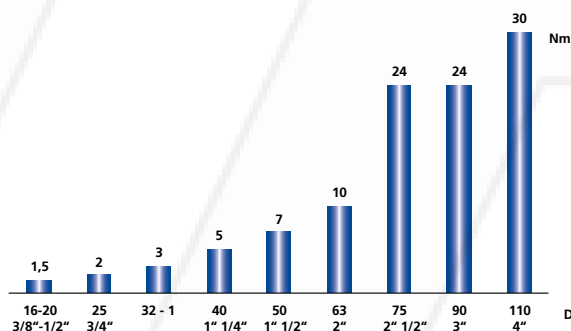

PVC-u Industrial Manual Ball Valves

Tel: 01626 201092

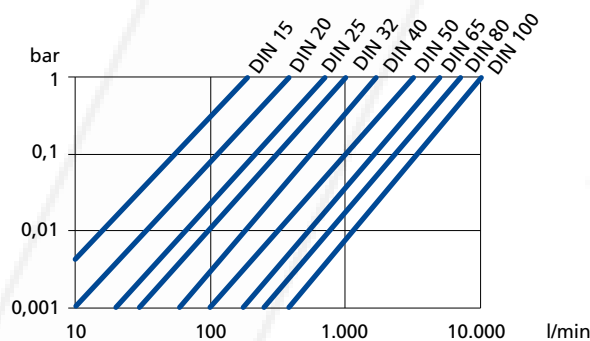

Technical Features

- Floating full bore ball locked in place on both sides
- Fully round ball smoothed by special turning machine
- Machined stem seat
- Solvent welded sockets, threaded sockets
- PTFE ball seatings
- Nominal pressure (PN): 16 bar – 232 psi at 20°C
- Handle with combined key for the dismantling of the valve and the tightening of threaded gasket carrier
- Valves individually tested
- The valves are manufactured with a PVC-u fit for contact with potable water in accordance with regulations in U.K., Italy, France, Germany, Holland, and Scandinavian countries.

PVC-u Water Supply Manual Ball Valves

Tel: 01626 201092

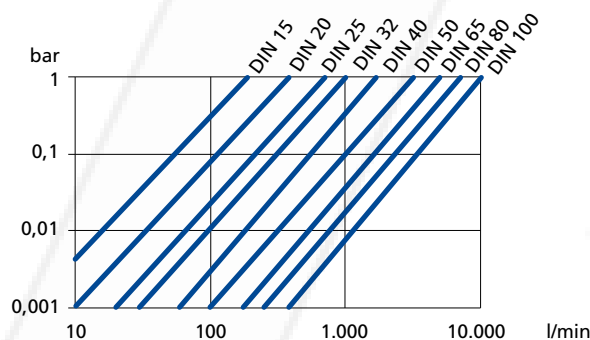

Technical Features

- Floating full bore ball locked in place on both sides
- Fully round ball smoothed by special turning machine
- Solvent welded sockets or threaded sockets
- PE ball seat
- Nominal pressure (PN): 16 bar – 232 psi at 20°C
- Handle with combined key for the dismantling of the valve and the tightening of threaded gasket carrier
- The valves are manufactured with a PVC-u fit for contact with potable water in accordance with regulations in U.K., Italy, France, Germany, Holland and Scandinavian countries.

PVC-U Double union check valves

New EFFAST check valve: new spring check valve, ideal for use in applications that require precise closure and noiseless movement, and ball check valve, without metal parts to be used with corrosive fluids and suitable as foot valve. Suitable for use in water treatment, SPAs and pools.

PVCu - Valves

Ball Check Valve CB

- Suitable for vertical installation
- PVC-U high surface finish machined ball
- EDPM or FKM seals available
- No metal parts in contact with the fluid
- Also suitable to be used as a foot valve

Spring Check Valve

- Suitable for vertical and horizontal installation
- Stainless Steel Spring: PTFE coated spring available on request
- EDPM or FKM seals available
- Transparent PVC Body available, for easier inspection of the plant
- Marine Application Certificate

Tel: 01626 201092

PVC-u Check Valves

Spring Check Valve

Ball Check Valve CB

1. Spring, ideal for horizontal installation. Silent closure and **perfect seal, even with low back pressure** and in case of strong vibrations.
2. **Safe and controlled movement**, thanks to the guides on plunger.
3. **Shaped gasket** for a secure seal even at low temperatures.
4. **Smooth finished Ball and self-cleaning internal valve.** Ideal for conveying dirty fluids.

Technical features

Nominal pressure	PN 16 (20°C)
Dimensions	DN 15 - DN 50 (d. 16 - 63 mm - 1/2" - 2")
Valve material	PVC-U
Seals material	O-rings: EPDM or FKM
Temperature range	0°C - 60°C
Coupling standards	Solvent welded sockets: Metric, BS Threaded sockets: BSPP

PVC-u Diaphragm Valves and Pressure Reducer Valves

Tel: 01626 201092

Technical Features

- The diaphragm valve has a low maintenance membrane actuator which can be controlled by air or inert gases. Normally Closed (NC), Normally Open (NO) and Double Acting (DA) control functions are available. All medium wetted parts and the actuator housing are made of high-grade plastic materials which can be selected to suit the application.
- The chemical resistance of the valve is subject to the type of fluid, the temperature, the pressure, as well as the materials and seals of the valve.
- Optimized pressure drop due to body design.
- Stainless steel mounting inserts designed to support the valve. Same distance between the inserts for all DN.
- Standard handwheel
- EPDM, FKM, or PTFE diaphragm (EPDM backing).

PROFLOW H

PVC-u Butterfly Valves

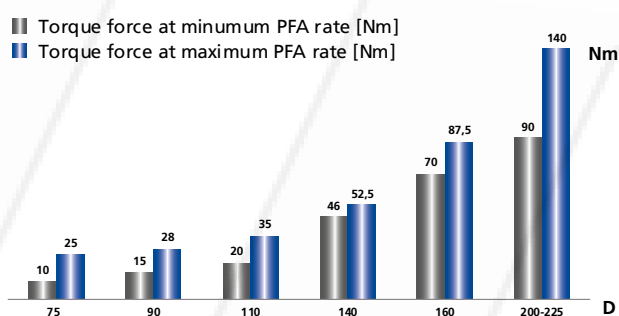

Tel: 01626 201092

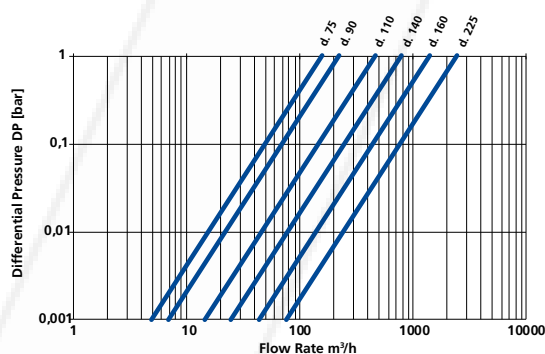

Technical Features

- HighFlow patented disc with high flow profile. Higher flow rate and smaller pressure loss than traditional discs. The offset disc allows excellent rolling of the fluid, and then an accurate flow regulation
- PVC-u body machined to guarantee a secure seal
- EDPM or FKM certified main gasket
- SS AISI 420 B or SS AISI 316 Stem
- Ergonomic handle with closing system “push and rotate”
- Regulating plate with 19 positions between 0° and 90°
- Nominal pressure (PN): 10 bar – 145 psi (20 °C)
- Holes compatible with the international standards (DIN, ANSI, JIS)
- The valves are manufactured with a PVC-u fit for contact with potable water in accordance with regulations in U.K., Italy, France, Germany, Holland and Scandinavian countries.

PVC-u Flowmeter

Tel: 01626 201092

Function

The flow meter operates on the float principle and is used for flow rate measurements in closed pipelines.

The medium flows through the vertically installed flow meter from bottom to top.

This raises the float and shows the current flow rate on the scale on the measuring device. The read-off edge corresponds to the largest diameter of the float.

The flow meters come as standard with a water scale and a % scale, and two setpoint indicators.

Special Features

- Fracture-proof and corrosion-resistant
- Radially removable
- Special adhesive scales for liquid and gaseous media
- Holder for accessories (limit value contacts)
- Measuring tube carries the DN label, and also the measuring range and material
- PVDF floats and stops as standard
- Operating pressure PN 10 bar at 20 °C

ABS Valves, Pipes and Fittings

ABS (Acrylonitrile Butadiene Styrene) is highly rated as a thermoplastic pipework system and is used in many applications such as food and beverage processing as well as water and sewerage treatment and many other industries.

ABS has good chemical resistance with high impact strength and low moisture absorption. ABS is non-toxic and conforms to the toxicological requirements of the British Plastic Federation, British Industrial Biological Research Association Code of Practice for food usage 45/5.

It also fulfils the EEC requirements for plastic materials in contact with foodstuffs.

ABS systems are lightweight, rigid and easy to install using a solvent cement.

Colour

ABS products are recognised by their light grey colour (RAL 7046).

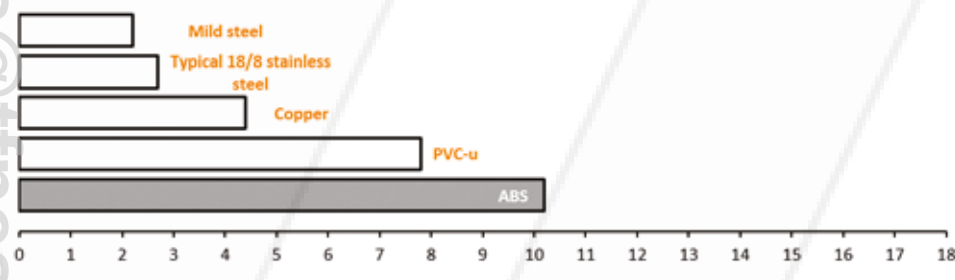

Chemical Resistance

Effast ABS has good resistance to most diluted inorganic acids, salts, animal fats and oils and organic acids. It is not resistant to organic solvents, alcohol, petrol, acetic acid or vegetable oils.

Recommendations can be given by our Technical Department regarding the resistance of ABS to specific chemicals. Alternatively, see pages 155 - 159 for a Guide to Chemical Resistance.

Thermal expansion

The thermal coefficient of linear expansion for ABS is $10.1 \times 10^{-5} \text{ m/m } ^\circ\text{C}$. It is necessary in certain situations to make special provision for this expansion and contraction. Thermal expansion of ABS is compared with other materials, in the following chart.

Temperature range

-40 °C to +60 °C

Standards

- BS 5392

Acrylonitrile-butadiene-styrene (ABS) fittings for use with ABS pressure pipe. Specification

- BS 5391

Acrylonitrile-butadiene-styrene (ABS) pressure pipe. Specification.

- EN 10226-1

Pipe threads where pressure tight joints are made on the threads – Part 1: Taper external threads and parallel internal threads – Dimensions, tolerances and designation.

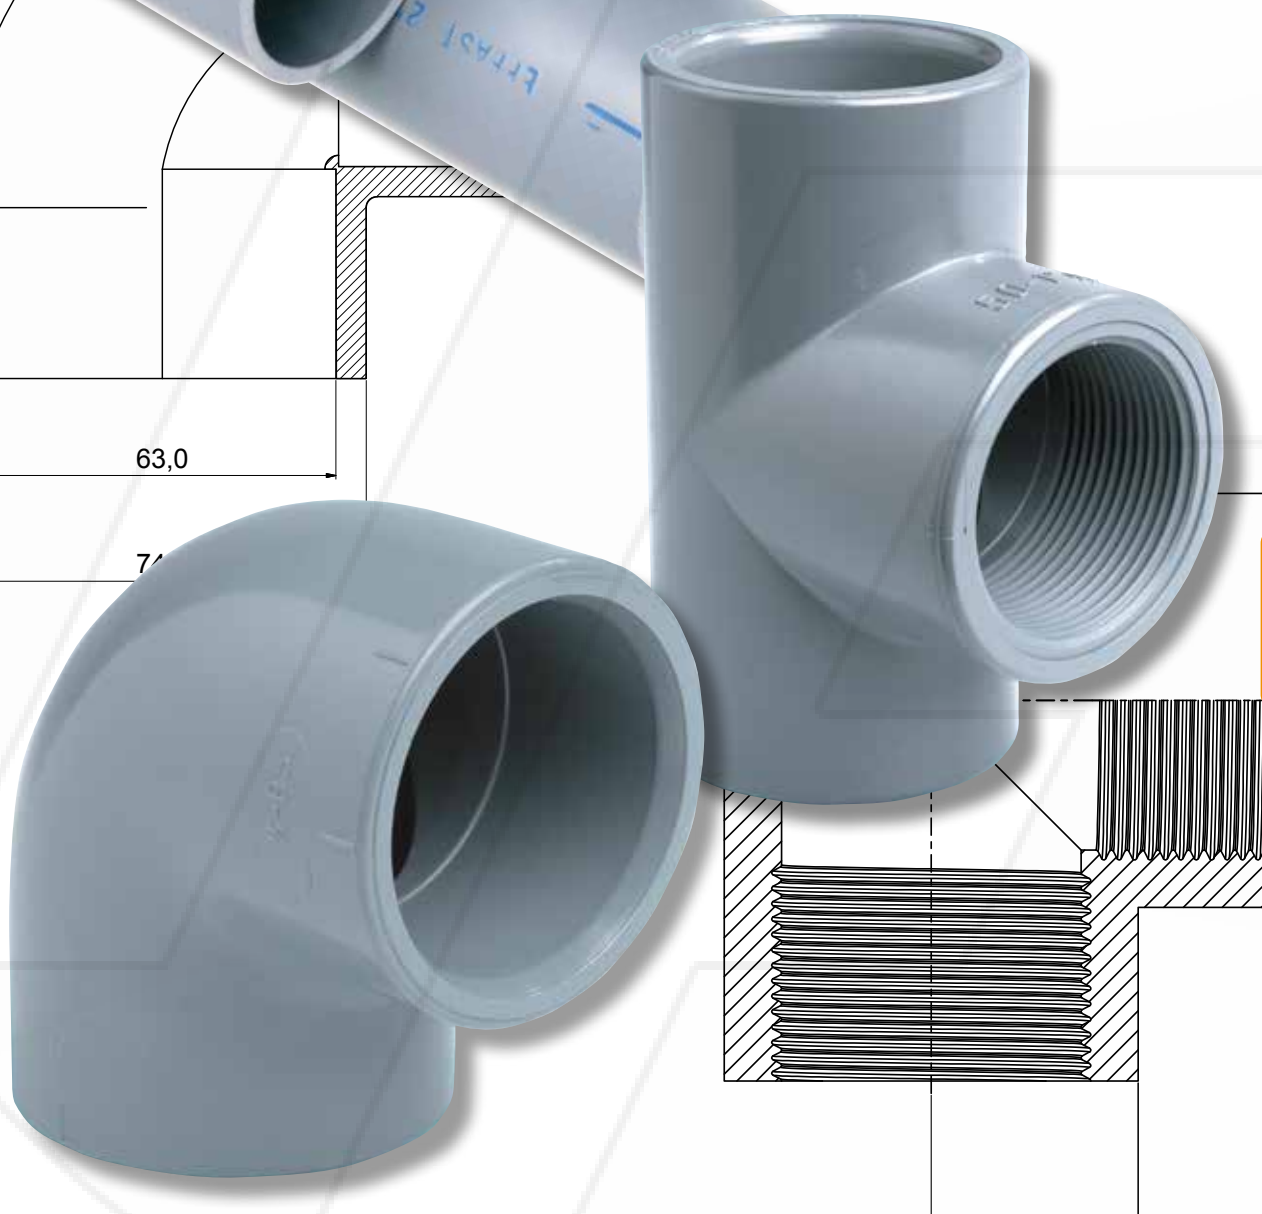

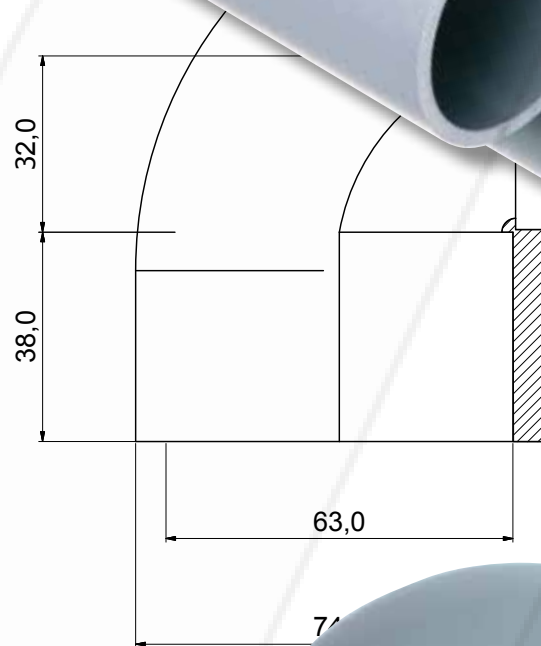

- DIN 2999

Pipe threads for tubes and fittings; parallel internal thread and taper external thread

- DIN DVS 2204-3

Adhesive bonding of thermoplastic pipes and pipe components – Acrylonitrile butadiene styrene (ABS).

ABS Industrial Manual Ball Valves

Tel: 01626 201092

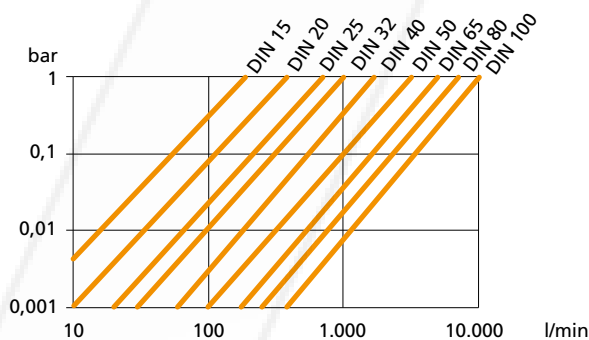

Technical Features

- Floating full bore ball locked in place on both sides
- Fully round ball smoothed by special turning machine
- Solvent welded sockets or threaded sockets
- PTFE ball seat
- Nominal pressure (PN): 16 bar – 232 psi at 20°C
- Handle with combined key for the dismantling of the valve and the tightening of threaded gasket carrier
- Valves individually tested
- The valves are manufactured with a ABS fit for contact with potable water in accordance with regulations in U.K., Italy, France, Germany, Holland and Scandinavian countries.

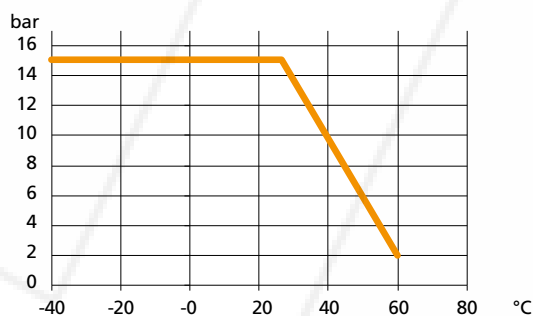

Torque: ABS Ball Valves

Pressure Loss: ABS Ball Valves

Maximum Working Pressure: ABS Ball Valves

ABS Auxiliary and Check Valves

Tel: 01626 201092

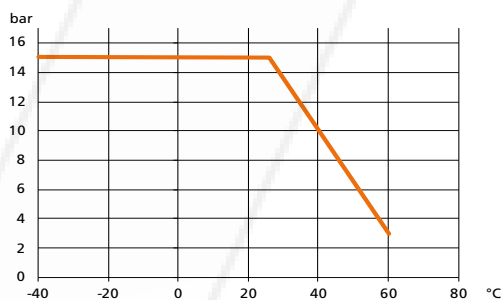

Technical Features

- Stainless steel spring or PTFE coated
- Nominal pressure (PN): 16 bar – 232 psi at 20°C
- May be used either vertically and horizontally
- Solvent welded sockets or threaded sockets
- The valves are manufactured with a ABS fit for contact with potable water in accordance with regulations in U.K., Italy, France, Germany, Holland and Scandinavian countries.

Pressure Loss: ABS Check Valves

Maximum Working Pressure: ABS Check Valves

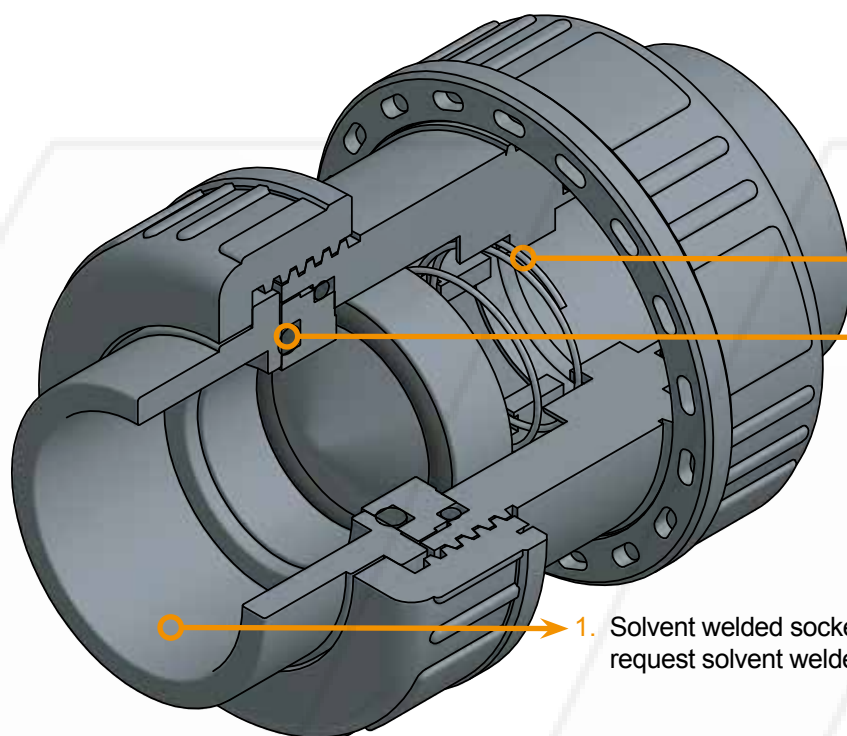

Flow Rate: ABS Check Valves

Actuated Valves

Actuated Valves

Tel: 01626 201092

Actuation valve and control

Pneumatic Actuation

Pneumatic actuators are air operated mechanical devices which convert compressed air pressure into mechanical force to operate the valve. No leakage ensures zero contamination in surrounding areas. Requires centralised source of compressed air.

- 1 year warranty
- Available in both double acting and spring return
- ATEX EXII2GDcT certification
- Assemblies based on a 6 bar air supply (8 bar max)
- Compliant with Namur & VDI VDE3845
- ISO 5211 and DIN 3337 compliant
- Hard anodized aluminum body and epoxy coated end caps
- Double acting torques from 9 to 3916 Nm at 6 bar
- Single acting torques from 9.5 to 1547.5 Nm at 6 bar

Accessories

Switchbox and solenoid option available on request

Electric Actuation

Electric Actuator converts electrical input into kinetic energy to operate the valve. Electric actuators provide precise control and positioning and have low operating costs.

- 3 year / 60,000 cycle warranty (whichever comes first)
- Accepts 24-240VDC/ VAC 50/60Hz (-0/+5%) external power range
- Multi-coloured LED light for continuous status feedback to user
- Brushless motor technology
- All external electric connections via DIN plugs
- Thermostatic anti-condensation 3.5W heater
- Electronic torque limiter
- Dome local high visibility position indicator
- 2 volt free end of travel confirmation switches
- Handwheel operated selectable manual override

Accessories

Modulating and fail-safe options available

Construct your requirements in a four stage process

1 Choose Pneumatic or Electric Actuator

2 Choose your valve material

3 Choose your seal material

4 Choose your valve style

Guide to solvent jointing

Important Information

- Always use Personal Protective Equipment - gloves and eye protection
- Always carry out work in a well ventilated area
- Always refer to Material Safety Data Sheets
- Dispose of waste responsibly
- Failure to follow the jointing procedure may invalidate any warranties given

Procedure		Equipment								
1. Cut the pipe at right angles to its axis and to the required length. Debur the cut end of the pipe with a sharp knife or scraper.		Pipe cutter Saw Scraper or knife								
2. Chamfer the leading edge of the pipe at approximately 15° to 30°. This will prevent the solvent cement being wiped from both the pipe and fitting when mated together and will also help to build up a ring of solvent around the chamfer, thus ensuring a proper seal.	 <table><tr><td>Pipe Size</td><td>Chamfer size (mm)</td></tr><tr><td>3/4" (16mm)</td><td>2</td></tr><tr><td>1/2" - 1 1/2" (20 - 50mm)</td><td>3 - 4</td></tr><tr><td>2" - 8" (63 - 225mm)</td><td>5 - 6</td></tr></table>	Pipe Size	Chamfer size (mm)	3/4" (16mm)	2	1/2" - 1 1/2" (20 - 50mm)	3 - 4	2" - 8" (63 - 225mm)	5 - 6	Chamfering tool Fine disc angle grinder, file or abrasive paper (80 - 100 grit)
Pipe Size	Chamfer size (mm)									
3/4" (16mm)	2									
1/2" - 1 1/2" (20 - 50mm)	3 - 4									
2" - 8" (63 - 225mm)	5 - 6									
3. Mark the pipe back from the chamfered end to a length equal to the socket depth plus 5mm. This mark will act as a visual indicator to show that the pipe is fully inserted into the socket.		Marker pen								
4. Roughen or clean the pipe surface with solvent cleaner (up to the indicator mark) and the inside of the socket. Do not roughen the pipe and fitting to the extent that the clearance between them is noticeably increased.		Abrasive paper / cloth (80 - 100 grit)								
5. Clean the inner surface of the socket and the surface of the pipe up to the mark using a lint free cloth or absorbent paper dampened with Effast solvent cleaner.		Lint free cloth or absorbent paper Effast solvent cleaner								
6. Select the correct solvent cement, PVCu to PVCu, ABS to ABS (failure to use the recommended solvent cement may invalidate any warranties given). Apply the cement straight from the tin and ensure all relevant surfaces are covered. Read the instructions on the tin. Avoid using excessive amounts of solvent cement.		Effast PVCu cement Effast ABS cement Brush (half the diameter of the socket)								
Joints are normally made in temperatures between 5 - 25°C. The maximum time before the cement is too dry for jointing is approximately 3 minutes. In hot weather this time is reduced, but the joint must still be made whilst the cement is wet At temperatures below 5°C the curing time will be considerably increased.										

7. Push fittings/pipe together without twisting and ensure that they are aligned and fully engaged (the indicator mark should be in line with the edge of the socket) then hold the assembly for a short time as specified.

Pipe size	Holding Time (minutes)
3/8" - 2" (16mm - 63mm)	1/2
2 1/2" - 4" (75 - 119mm)	3/4
5" - 8" (140 - 225mm)	1
10" - 12" (250 - 315mm)	2

Post-weld Procedure

When the joint is made, an O-ring of cement is formed between the pipe chamfer and the internal socket wall. This ring helps to ensure seal integrity. A bead of cement will show around the external junction of the pipe and fitting, this should be wiped off leaving the outer part of the joint clean. Do not disturb for at least 10 - 15 minutes to ensure that the weld integrity is maintained. After this period, the assembly can be carefully handled, prepared for further jointing or left for the recommended curing time which is:

Up to 8" (225mm)

After 8 hours The joint will have cured enough to withstand the working pressure

After 24 hours The pipe system can be fully pressure tested

The number of operators:

For joints of up to 2½" (75mm) 1 person is required, from 3" (90mm) up to 6" (160mm) 2 persons are needed, for 8" (225mm) and above 3 people are required.

Pipe work should be ventilated during the joining and curing processes. Never seal a pipe system which has been newly jointed as the trapped vapours can cause damage. Positive ventilation with a small air blower is recommended to purge systems with multiple joints.

Recommended Joints per Litre of Effast Cement

Pipe Size		Thermoplastic Material	
Inch	mm	PVCu	ABS
¾" - 1"	16 - 32	300	400
1¼" - 2"	40 - 63	120	175
2½" - 3"	75 - 90	50	70
4"	110	30	45
5"	140	20	30
6"	160	15	25
8"	200 - 225	8	15
10"	250 - 280	3	4
12"	315	3	4

Important points

- Heavy equipment must be supported independently from the pipeline. i.e. valves, strainers, etc
- Pipe clips should be made to allow linear expansion of the pipeline, and if lined the lining should be of a material compatible with the pipeline.
- Mastics, intumescent mastics, adhesive tapes and labels should not be used (as many degrade plastics), unless manufacturers provide documents of adhesive or mastic compatibility.
- Insulation must be considered very carefully, as a number of foam rubber insulation products and their adhesives may not be compatible with plastic pipes. Adhesives should only be used to bond the foam edges together, and should never be used to bond the insulation to the pipeline. Refer to manufacturers for compatibility data. For example, compatible insulations are fibre wools (Rockwool), polystyrene, etc.
- Trace heating tapes: Don't use tapes covered with plasticised PVC as this can react with thermoplastic pipes. Tapes with sheaths made from woven wire, polyester, or silicone rubber are acceptable.
- Oils: A number of synthetic oils are not suitable for use with plastic pipelines. Oils such as esters, organic phosphates, and polyalkylene glycols should be avoided.
- Health and safety: Solvent cement and cleaning fluid give off vapours that are dangerous to health. During jointing the work place must be well ventilated.

Solvent Jointing - Do Not

- Make joints in rain or wet conditions.
- Use dirty brushes or cleaning rags.
- Use the same brushes with different solvent cements.
- Dilute or thin solvent cements with cleaner.
- Leave solvent cement tins open as the contents will evaporate and the cement performance will be reduced.
- Use near naked lights or smoke whilst jointing as solvents are highly inflammable.
- Make joints in a confined space as solvents emit hazardous vapours.

Support under pressure

When it comes to our plastic pressure systems, you not only get a wide choice of materials, but quality valves designed to maintain optimum flow rates. What's more you'll have the dedicated support of our sales and technical teams at every stage of your project.

Quality under pressure

Our innovative range of plastic pressure systems come with the widest range of materials and choice of valves designed to maintain optimum flow rates. What's more, they consistently achieve quality approvals, including WRAS and BSI Kitemarks.

Performance under pressure

You can depend on our plastic pressure systems for a wide choice of high performance materials and valves. Plus, with our national network, we can deliver next day*.

*On orders submitted on a working day before 5pm

That's **Polypipe Effast**
